Contents

Product Name(s) and Version(s)

iPatientCare 18.0. (CHPL Id: 15.04.04.2627.iPat.18.00.1.17120)

iPatientCare 22.5 (CHPL Id: 15.04.04.2627.iPat.22.01.1.221221)

iPatientCare 23.0 (CHPL Id: 15.04.04.2627.iPat.23.02.1.230522)

Standards Version Advancement Process (SVAP)

Under the ONC's Standards Version Advancement Process (SVAP), developers of certified health IT are permitted to voluntarily certify to newer versions of adopted standards that have been approved by the National Coordinator via the SVAP. iPatientCare intends to voluntarily certified to the below standard by 31st Dec 2023.

Certification Criteria	Approved Standard
170.315(c)(3) - Clinical quality measures (CQMs) — report	CMS Implementation Guide for Quality Reporting Document Architecture: Category III; Eligible Clinicians and Eligible Professionals Programs; Implementation Guide for 2023 (December 2022)

Impact on Real World Interoperability

These updates are required for compliance to the CMS eCQM Reporting Programs like QPP-MIPS, and iPatientCare has been giving these updates annually. Hence, we do not believe this will have any negative impact.

Support for the Current Version

iPatientCare will no longer support the earlier versions once it has been upgraded to the implementation guide for 2023 since the earlier versions are no longer required for submission of eCQMs.
